Activity 14: Corner Detection (10 Minutes)

Tasks:

1. What is a corner in an image?

2. Name one corner detection algorithm.

3. Why are corners useful in object tracking?

4. Difference between edge and corner.

Answer:

1- A corner is a point in an image where there is a significant change in intensity in two different directions.

2- Harris Corner Detection algorithm.

3- Corners are useful in object tracking because they are distinctive and stable features that can be easily identified and matched across consecutive frames.

4- An edge is a boundary where the image intensity changes mainly in one direction, whereas a corner is a point where the intensity changes significantly in two or more directions.
