UNIT 2: SHAPES AND REGIONS

SESSION 3: SIZE FILTERING

SLO 1: APPLY SIZE-BASED FILTERING TECHNIQUES TO REMOVE NOISE AND IRRELEVANT OBJECTS FROM BINARY IMAGES.

Quick Concept Check

Write True (T) or False (F).

1. Size filtering removes objects based on their pixel area. T
2. Noise in binary images usually appears as very small objects. T
3. Large objects are always considered noise. F
4. Size filtering helps improve object detection accuracy. T

Identify the Concept

Choose the correct answer.

1. Which technique removes small unwanted objects from binary images?
   a) Edge detection
   b) Size filtering ✓
   c) Histogram equalization
   d) Image compression
2. Noise in binary images is usually represented by:
   a) Large objects
   b) Small random pixels ✓
   c) Background pixels
   d) Smooth regions
3. Size filtering is mainly based on:
   a) Pixel intensity
   b) Object color
   c) Object area ✓
   d) Image brightness
