UNIT 2: SHAPES AND REGIONS

SESSION 7: HANDLING OCCLUSION

SLO 2: DEVELOP AND APPLY METHODS TO ROBUSTLY DETECT AND ANALYZE OBJECTS DESPITE OCCLUSION.

Strategy Builder

Below are some techniques used to handle occlusion.

Match the technique with its purpose.

Technique	Purpose
Feature-based recognition	A. Detect objects using visible features
Multi-view analysis	B. Analyze objects from different viewpoints
Machine learning models	C. Predict missing parts of objects
Shape completion	D. Reconstruct partially hidden shapes

Quick Thinking Task

Complete the sentence:

Even if part of an object is hidden, computer vision systems can still detect it by analyzing the _____visible_____ features of the object.
